The workflow in Photoshop Elements is different to Photoshop's, but can still be applied. Organize a folder I recommend creating a folder that is only for your import files. This way, you only have a folder full of final images. This will make it easy to navigate through your photos and only see the files you want. I recommend that you do this for each project you shoot. For this guide, I am going to be using my folder that is attached to this tutorial. I like to use GoogleDrive as a file storage service. It is free and a great way to organize your files. Layers Adobe Photoshop Elements has 16 layers, but you can only move one layer at a time. Photoshop is different, you have to unlock the layer to be able to move it. 1. Field of the Invention The present invention relates to a power transmission apparatus, an energy recovery type steering system which transmits energy from a vehicle during deceleration of a vehicle and recovers the energy, and a power transmission method for the energy recovery type steering system. 2. Description of the Related Art Recently, there has been an increase in the number of vehicles, which are operated by receiving electric power supplied from a vehicle-mounted power supply (to be referred to as a power supply hereinafter) mounted in the vehicle. For example, the Japanese Patent Laid-Open Nos. 11-336708 and 11-364021 disclose energy recovery type steering systems which transmit electric power from the power supply mounted in a vehicle to a steering mechanism to assist a steering operation and recover electric power used for the steering operation. The energy recovery type steering system transmits electric power from a steering wheel which is operated by a driver to a steering mechanism, and recovers the electric power from an electric motor which is driven in a forward direction by the electric power transmitted from the steering wheel, through an energy transfer device. In the energy recovery type steering system, a command value for operating the steering mechanism is determined based on the steering wheel operation information and transmission efficiency of the energy transfer device. If the transmission efficiency of the energy transfer device is low, transmission of electric power from the steering wheel is reduced. In this case, it is difficult to set a steering torque command value at a desired level, which results in a failure in steering assist. Thus, it is important for the steering system to suppress reduction in transmission of electric power from the steering wheel. In the energy recovery type steering system, the steering wheel is operated by the driver, and the energy transfer device is driven in the forward direction by the electric power transmitted from the steering wheel through the energy transfer device to operate a motor. Thus, electric power is consumed by the energy transfer device, and energy recovered by the energy transfer device is reduced. To prevent the reduction of energy recovered by the energy transfer device, it is effective to reduce consumed power in the energy transfer device. In this case, however, the load condition of the energy transfer device is not favorable for energy recovery. An object of the present invention is to provide a power transmission apparatus, an energy recovery type steering system, and a power transmission method which can reduce energy consumption without reducing the transmission amount of electric power from a steering wheel. According to the present invention, there is provided a power transmission apparatus
