

---

Omega Composer is software for Scratch Live which allows you to create your own unique soundfonts. It automatically generates the patch files required, and leaves you with just a file to upload through the plugin interface in Live itself. This is a free download that will need you to follow some simple steps. Out of all the free download Omega Composer software out there, this one has saved me more than any other. It's not a replacement for a full sound design suite, but it's a great alternative to the more expensive options out there. Any modern PC with Windows will have everything you need to run Omega Composer. Find the download link below... The difference between the various file formats is that your audio files can be in either .wav or .ogg format. Wav is uncompressed audio, but large in size. Ogg is compressed at a lower rate, so it will produce smaller files which you can fit on the MIDI track within Live itself.

The software allows you to save your own patches or download others from their community site. You can also save your created patches as a .WAV file for playback through the software. A WAV file is huge, so be prepared for some large files. The software comes with a few examples to get you started. Following on from the first part of this article, Omega Composer provides a method to save your own patches or edit those that have been uploaded by others. The interface is incredibly easy to use, and very modern-looking with large playlists showing all of your saved files. Omega Composer supports many different types of synthesis engines, which can be found here: <https://www.omegacompose.com/synth-engines/>. The interface is very simple, and after creating a new bank, generating a patch will be as easy as clicking the 'Generate' button. The new patch will be added into the playlist of created patches on your left hand side of the screen. Uploading your patches to Scratch Live is as simple as right-clicking on a new patch and uploading it to Scratch Live as an instrument.

Omega Composer has been discontinued due to lack of resources and support for this freebie software. But there are other softwares for omega composer download:
